Lidocaine Polyox Bandage Information Sheet

Use: It is to be used for wound care, to help dry up the wound and control the pain.

Directions: Wet affected tissue with water. Lightly coat the area with the bandage material from the puffer. Wet the area again and apply powder again. Repeat steps 1 more time. Always start with water and end with water. The bandage should stay in place for 3-4 hours.

For any questions, either talk to your healthcare provider or your pharmacist.
