Nicotine Lollipop

What is the Nicotine Lollipop?

The Nicotine lollipop is Nicotine Polacrilex combined with an artificial sweetener (saccharin) and flavorings in a sugar-free sorbitol base. The nicotine lollipop is a medication and should be treated as such. Keep out of reach of children. Nicotine is a poison.

What strengths and flavors are available?

We have 2mg and 4mg and 8mg available in many different flavors, including strawberry, lemon-lime, cherry and many others. We can customize the dose based on what your physician orders and you can choose the flavor.

How to use the Lollipop

Place in the mouth when you feel the urge to smoke. Leave it there until the urge is over. Once the urge passes, replace the lollipop in the childproof vial provided and reuse the next time the urge strikes. One lollipop usually lasts as long as one pack of cigarettes.

How can the Nicotine Lollipops help to quit smoking?

The lollipops are intended to help smokers quit their tobacco habit. They are designed to be used to help wean the patient off completely.

Why use the Nicotine Lollipop?

The Nicotine Lollipop allows the individual to control the amount of nicotine taken in based on the body's needs. A major part of quitting is psychological. The lollipop deals with the hand to mouth fixation.

For any questions, either talk to your healthcare provider or your pharmacist.

These are not candy. Please keep out of reach of children and pets.
